

## INVESTOR SAFE

Is a specialised service for **PATENT DUE DILIGENCE**, for investors.

An investor before investing in any business simply requires an answer to whether technology, protected as a patent, is it safe to invest in terms of monopoly it provides

An intellectual property asset is created via a documented journey (prosecution). The journey is marked by legal requirements to be fulfilled. This is important as the patent law provides provision after grant, that a granted patent may be opposed and/or revoked anytime before expiry. This means, patent office does not take responsibility for its decision of granting a patent and the onus is on the investors to ensure the validity of the patent. Hence, a granted patent does not mean a clean slate to write a success story. Therefore, proper investigation is required to mitigate the risk of investment in a patent or patent portfolio or technology. Further, a patent document is a techno-legal document which is not easily deciphered by a person who is not skilled in the art; hence proper diligence is required from Patent Professionals.

Investor safe makes technology investor safe and provides information for the investors to take calculated risk.

### **Deliverables:**

**Claim Mapping** - for explaining what exactly a patent documents claims and features that are different from the competitors;

**Legal Standing** - How strong are the claims and whether the patent can be invalidated based on the non-fulfilment of the legal requirements during prosecution of the patents?;

### **Reviewing ownership and dispute factors**

**Operability** - whether the operation of claims tend to infringe the claims of other patents
