PRODUCT DESIGNING

The product designing is creating new product out of ideas. The uniqueness of a product, however, does not subsist only on its technology, but also on Three Dimensional outlook or aesthetics or design of it, which distinguishes itself purely on its looks, thus creating a brand identity.

At Videaim IP, our engineers design 3D look of a products before prototyping so that aesthetically the product stands out, looks attractive, original, and ergonomically designed. The product designing however is not limited to sketching and prototyping, but also solving technical problem associated with the shape, size, and configuration.

Services:

- Physical prototyping;
- Virtual prototyping
- Design research - Reverse Engineering
- Product design;
- 2D-3D animations;
- Industrial and Engineering design;
- White board animation; and
- Flyers, sell sheet and visiting cards.
